Nguyen Huu Thang

Software Engineer Intern

Email: nhthang312@gmail.com | Phone: +84 84993 3375
GitHub: InfinityZero3000 | Portfolio: InfinityZero3000

Career Objective

A results-driven Software Engineering student specializing in .NET Core and Computer Vision. Proven track record in building high-performance websites with Clean Architecture and developing state-of-the-art Deep Learning models. Committed to optimizing system scalability and enhancing AI model reliability for real-world applications.

Education

- **Ho Chi Minh City University of Industry and Trade (HUIT)** — Ho Chi Minh City, VN
  Bachelor of Information Technology; Major: Software Engineering; GPA: 3.0/4.0 — *Sep 2023 – Present*

Skills

- **Languages**: Python, SQL, C#, C++, HTML/CSS/JavaScript
- **Technologies/Frameworks**: .NET Core(C#), React/Next.js, OpenCV, AI/ML
- **Tools & Others**: Git/GitHub, Docker, Postman, PostgreSQL, Problem-Solving, Teamwork

Projects

- **John Henry - E-commerce Website** — GitHub: Link
  Personal Project — .NET Core, PostgreSQL, Redis — *Web Development*
  - **Architecture**: Engineered using Clean Architecture principles to ensure high maintainability, testability, and separation of concerns.
  - **Security & Auth**: Implemented Google OAuth 2.0, 2FA, and Multi-role RBAC for granular access control.
  - **Reliability**: Integrated API Rate Limiting to mitigate DoS attacks and established an Audit Log system to track critical orders and system events.
  - **Performance**: Optimized data retrieval using Redis Cache and integrated VNPay for secure, real-time financial transactions.
- **Hybrid CNN-CBAM-ViT for Skin Cancer Classification** — GitHub: Link
  Research Project — Python, TensorFlow, Computer Vision — *Deep Learning / Computer Vision*
  - **Novel Architecture**: Developed a hybrid model combining CNN (local features), CBAM (spatial/channel attention), and Vision Transformer (ViT) for global context.
  - **Performance**: Achieved an **F1-score of 92.49%** and **Accuracy of 92.65%** on ISIC validation datasets.
  - **Generalization**: Validated on real-world clinical datasets with a sustained average accuracy of **70%+**, significantly outperforming baseline CNN models.
  - **Contribution**: Designed the attention-enhanced pipeline to reduce false negatives in early-stage diagnosis support.

Activities

- **Algorithm Practice**: Active on LeetCode and GitHub, focusing on optimizing time/space complexity and system design patterns.
- **Cursor Hackathon**: Participated in an AI-focused hackathon, leveraging AI-native development tools (Cursor) to accelerate code generation and system prototyping.
- **Algorithm Practice**: Consistently active on LeetCode and GitHub, focusing on optimizing data structures and algorithm complexity.
