CAREER OBJECTIVE

A dedicated Software Engineering student with a strong foundation in **Python, SQL, and C#**. Passionate about building scalable web applications and exploring the potential of **Artificial Intelligence**. Currently seeking an internship to contribute to real-world projects, enhance technical skills, and deliver high-quality software solutions.

EDUCATION

- **Ho Chi Minh City University of Industry and Trade (HUIT)** Ho Chi Minh City, VN
Bachelor of Information Technology; Major: Software Engineering Sep 2023 – Present
 - **GPA:** 7.8/10.0
 - **Relevant Coursework:** Data Structures and Algorithms, Database Management Systems (SQL), Web Development, Object-Oriented Programming (OOP).

SKILLS

- **Languages:** Python, SQL, C#, C++, HTML/CSS
- **Technologies/Frameworks:** .NET Core(C#), React/Next.js (Web), OpenCV, TensorFlow/Keras (AI/ML)
- **Tools & Others:** Git/GitHub, Visual Studio, PostgreSQL, Problem-Solving, Teamwork

PROJECTS

- **John Henry Fashion - E-commerce Website** GitHub: Link
Personal Project Web Development
 - **Description:** Developed a full-stack e-commerce platform for fashion products.
 - **Core Features:** User authentication, product catalog management, shopping cart, and order processing.
 - **Tech Stack:** Used C#/.NET for backend logic and PostgreSQL for database management.
- **Skin Cancer Classification** GitHub: Link
Research Project Deep Learning / Computer Vision
 - **Description:** Developed a hybrid deep learning system for skin cancer classification to support early diagnosis.
 - **Model Architecture:** Combined **CNN** for local feature extraction, **CBAM** for channel and spatial attention, and **Vision Transformer (ViT)** to capture global contextual representations.
 - **Technical Contribution:** Designed the attention-enhanced pipeline to improve feature discrimination on dermoscopic images.
 - **Tech Stack:** Python, TensorFlow/Keras, OpenCV, NumPy.
- **Pain Detection System for Hospital Monitoring** GitHub: Link
Healthcare AI Project Computer Vision / Deep Learning
 - **Description:** Developed an AI-based pain detection system to assist nurses and doctors in monitoring patients' physical discomfort in hospital environments.
 - **Clinical Support Objective:** Automatically identifies facial expressions associated with pain to provide early alerts for medical staff, improving patient care and response time.
 - **Tech Stack:** Python, Deep Learning, Computer Vision.

ACTIVITIES

- **Self-Learning:** Consistently exploring new technologies on platforms like GitHub and LeetCode to improve coding and algorithmic skills.
- **Teamwork:** Collaborated with peers in university projects to design and implement software solutions using Agile principles.
